

TanhuDAO - TDAO

Welcome TanhuForce! Overview The DeFi space has exploded in the recent months. Yield Farming, Staking and Liquidity Mining have taken the space by storm, with participants earning by basically "locking" their tokens for a time. While generally great, these concepts have one downside: impermanent loss (IL). If you are farming/staking and the value of the underlying token changes significantly, even though you still get rewards, the value will far less than if you simply held your tokens.

The TanhuDAO smart contract applies a 10% fee on all transactions (buys/sells). Out of this, 7% is automatically distributed to holders, without farming! This means the amount of tokens in your wallet will forever increase as people transact.

This way IL is avoided altogether and in effect you get paid for just holding \$TDAO. In addition, the TDAO smart contract also takes 3% of each transaction and automatically adds it to the liquidity pool. The liquidity pool will continuously increase, which leads to a higher price floor of TDAO.

This is what TanhuDAO aims to new defi system:

You don't have to farm, stake or deposit your TanhuDAO. Simply hold it in your wallet and you will get more! Overview DAO is an autonomous yield and liquidity generation protocol that aims to directly reward its holders whilst concurrently increasing liquidity.

Tax and LP

This is funded by a 10% tax taken from each and every transaction. Consequently, the protocol has a permanently increasing price floor, with all investors earning additional TDAO tokens just for holding. Distributed proportionally across existing holders Transformed into BNB/TDAO LP Tokens, and added to liquidity Reflection TanhuDAO resides within a class of token that rewards investors just for holding, the

amount of rewards received increases over time the longer an investor holds for. Holders are also rewarded for the success of TDAO with higher transaction volumes leading to increased fees, and rewards for distribution. We believe this mechanism provides investors with an active stake in TDAO success! TokenEconomics Symbol: \$TDAO Initial Supply: 1000Quadrillion

- ☒ STEALTH LAUNCH NO PRESALE
- ☒ CONTRACT RENOUNCED OWNERSHIP
- ☒ LP LOCKED UNICYRPT&DXSALE
- ☒ DEV WALLET LOCKED FOR A MONTHS. (ADS CAMPAIN, CEX LISTINGS LIQUIDTY)
- ☒ CREATE JAPONESE AND INDONESIAN COMMUNITY

Token distribution display;

Token Burn Following launch, 50% of the total supply of TDAO was sent to the dead wallet address, permanently reducing the supply. TDAO dead wallet Address: 0x00dead As the dead burn address is classified as a TDAO holder it also receives a share of each transaction fee. Each share is burned leading to a persistently reducing circulating supply of TDAO. Liquidity Pool TDAO was launched with an initial supply of liquidity in the form of BNB/TDAO LP Tokens.

Ownership of the tokens was renounced by sending them to the burn address: 0x00dead This was performed to protect investors by preventing the possibility of a rug pull via liquidity removal for example. Additional liquidity is automatically added to TDAO from the 3% fee that is generated from each transaction. The fee is added to the liquidity pool by transforming it into BNB/TDAO LP Tokens, with ownership of the tokens renounced by sending them to the burn

address. Consequently, the token has a permanently increasing price floor in addition to an effectively reducing circulating supply of TDAO that are locked in the liquidity pool.

Blackburn System

It aims to offer more comprehensive returns than its competitors with its high burning system and ultra reward system. For example, when 100 TDAOs are traded, 7% of them are distributed to everyone. Most of the distributed tokens (about 50% at the moment) are collected as dead wallet holders. 3% becomes true pure burning, completely disappearing from the total supply.

Ultra rewards system

How can you win thanks to the ultra reward system? The 7% dispersed with each buy and sell, which corresponds to your rate, comes as a reward. In addition, the income of the transferred and locked tokens is distributed to you. When we reach our target number of owners, the overburn will accelerate even more. This burn rate will never change as the contract ownership is transferred. And new TDAO will never be produced again.

Security

To ensure that TDAO is unruggable, we continuously "locked" these tokens, thereby locking on dxsale and unicyrpt network.

Our crew TDAO is community owned, and the team is made up of a decentralised group of volunteers from all across the world.

Access to the team wallet is held solely by the developer: @ulgentdao If you would like to join us please say hello in our telegram channels.

Welcome TDAO !
